**Some wheat varieties are sold under multiple brand names. Therefore, in order to achieve genetic diversity in the seed you select to plant, please refer to the characteristic ratings, or consult Mississippi State University Extension for more information.*

***Variety maturity is rated specifically for the Delta region relative to other varieties. Later maturing varieties are more likely to avoid freeze-damage and thus are generally better suited to northernmost regions, particularly if wheat is planted early. Early-maturing varieties are best suited for relatively late planting dates.*

Varieties Adapted for North Mississippi

***Variety maturity is rated specifically for South Mississippi relative to other varieties. Earlier-maturing varieties are generally best suited for southernmost areas. Later-maturing varieties generally have marginal adaptation south of Highway 84 and may not yield well, or may fail to meet vernalization requirements (cold temperatures) to stimulate head production, particularly when planting late.*
