Tolerance scores were assigned on a scale of 1 to 10 with 1 being completely tolerant and 10 being completely susceptible. These data are intended to serve as an additional resource for variety selection specifically for soils with a history of problems associated with iron deficiency chlorosis. Consult other sources such as results from official variety trials and demonstration programs for detailed information regarding variety performance.

Publication 3259 (POD-07-18)

By **Trent Irby**, PhD, Associate Extension Professor, Plant and Soil Sciences; **Alanna B. Scholtes**, Extension Associate, Plant and Soil Sciences; **Greg Flint**, Extension Associate, Plant and Soil Sciences; and **Charlie Stokes**, Extension Agent, Monroe County.
