

Economic Contribution of Agricultural Sales

Pontotoc County, MS (2021)

extension.msstate.edu/economic-profiles

Commodity Output

Sales denoted in thousands of dollars
Source: IMPLAN 2021 Dataset

County Rank in Mississippi

Commodity	Ranking
-----------	---------

Oilseeds	18
Grains	26
Cotton/Cottonseed	24
Fruits/Vegetables	13
Other Crops	54
Cattle	34
Poultry/Eggs	55
Other Livestock/Dairy	58
Forestry/Logging	47

Economic Impacts	Employment	Labor Income	Value Added	Industry Sales
Direct Effect	789.9	\$16,514,064	\$22,343,641	\$40,546,144
Indirect Effect	45.5	\$1,962,495	\$2,406,072	\$4,776,952
Induced Effect	47.2	\$1,686,425	\$3,633,162	\$6,695,330
Total Effect	882.6	\$20,162,984	\$28,382,876	\$52,018,426

Employment denotes number of annual jobs.

Macro Industry Total Effects

Agriculture	815.1	\$17,624,504	\$23,313,252	\$41,551,517
Construction	1.6	\$57,722	\$56,010	\$290,928

MISSISSIPPI COUNTY ECONOMIC CONTRIBUTION OF AGRICULTURAL SALES PROFILES DATA KEY

Data Key — All data were obtained from the 2021 IMPLAN dataset (www.implan.com) except for commercial logging (2021 Harvest of Forest Products. John Auel. Mississippi State University Extension. January 2022.).

IMPLAN Sector Data

For this contribution analysis, data from the 2021 IMPLAN dataset were used. Each sector corresponds to several NAICS industry codes. Below is a non-exclusive list of the NAICS codes included in each of the IMPLAN agriculture sectors:

- **Oilseed Farming** — Field/seed production: soybean, canola, flaxseed, oilseed, sunflower, and oilseed/grain combinations.
- **Grain Farming** — Field/dry grain/seed production: rice, wheat, lentil, lima bean, pea, corn, barley, milo, oat, rye, broomcorn, and garbanzo.
- **Vegetable and Fruit Farming** — Field/seed production: sweet potato, carrot, potato, vegetable, melon, yam, bean, beet, cabbage, celery, collard, leafy greens, okra, pumpkin, pepper, tomato, grapes, citrus fruit, berry, fig, olive, tropical fruit, and other fruit/vegetable.
- **Greenhouse, nursery, and floriculture production** — Mushroom, herb, melon, Christmas tree, sprout, foliage, house plant, turf, sod, shrubby flower, and nursery growing.
- **Cotton Farming** — Field/seed production: cotton and cottonseed.
- **All other crop farming** — Field/seed production: peanut, hay, alfalfa, herbs, spices, and maple farming.
- **Beef cattle ranching and farming** — Beef cattle ranching and farming, calf production, cattle conditioning operations, dairy heifer replacement production, stocker and feeder calf production, fattening cattle, feed yards, and feed lots.
- **Poultry and egg production** — Egg, chicken, turkey, and duck production, and hatcheries.
- **Other Livestock/Dairy** — Made up of *Animal production, except cattle and poultry and eggs* and *Dairy cattle and milk production*. Includes dairy cattle and milk production, and the farming and production (including milk production) of many other animals such as quail, hogs, pigs, goats, catfish, bees, donkeys, sheep, horse, mules, deer, worms, among others.
- **Forestry, forest products, timber tract production, and logging** — Tract operations; gathering of aromatic wood gathering, balsam needles, bark, gum, moss, and forest products; growing trees; tree seed extracting; tree seed growing for reforestation; and harvesting moss or teaberries; cutting and transporting timber; rough wood manufacturing; field chipping; and rough wood mfg.

Economic Impact Estimates

The economic impact estimates contained in this profile were derived using the 2021 IMPLAN data and input-output relationships from IMPLAN (a proprietary economic impact estimation software package — <https://www.implan.com>) and information from the 2021 Harvest of Forest Products (<http://extension.msstate.edu/content/harvest-forest-products>). Definitions of individual economic effects are as follows:

Direct Effects—represent the initial change to industries considered relevant to the production agriculture and short rotation woody crops sectors.

Indirect Effects—represent changes in inter-industry transactions when supplying industries respond to demand changes from directly affected industries (the direct effects above).

Induced Effects—represent changes in local spending that result from income changes in the affected industry sectors.

Employment—annual average of monthly jobs in the industry. A job can be either part-time or full-time, and a person can hold more than one job (the employment or job count is not necessarily the same as the count of employed persons).

Labor Income—all employment income, including employee compensation (wages and benefits) and proprietor income.

Value Added—represents the difference between an industry's total output and the cost of its intermediate inputs. Intermediate inputs are calculated as gross output (sales or receipts plus other operating income plus inventory change) minus intermediate inputs (consumption of goods and services purchased from other industries or imported).

Output—represents the value of production (sales) by an industry in a calendar year.
