

Nematode Thresholds
Bermudagrass (Golf Green)

Numbers are expressed as populations of nematodes per 100cc of soil. These numbers are valid for light (sandy) soil. Numbers will be different for medium and heavy textured soils.

Nematode	Sample Season		
	Spring (March-May)	Summer (June-August)	Fall (September-February)
Dagger	220	220	275
Lance	66	66	88
Ring	330	330	440
Root-knot	66	66	88
Sheath	330	330	440
Sting	5	5	5
Stubby-root	88	88	110
