Early-maturing varieties are best suited for relatively late planting dates.

Early-maturing varieties are best suited for relatively late planting dates.

Varieties Adapted for South Mississippi

*Variety maturity is rated specifically for south Mississippi relative to other varieties. Earlier maturing varieties are generally best suited for southernmost areas. Later maturing varieties may have marginal adaptation in southern regions and may not yield well, or they may fail to meet vernalization requirements (low temperatures) to stimulate normal reproductive development during the spring, particularly when planted late.
