Economic Impacts	Employment	Labor Income	Value Added	Industry Sales
Direct Effect	534.2	\$14,647,174	\$18,811,179	\$123,031,196
Indirect Effect	114.8	\$3,666,766	\$4,733,560	\$11,967,902
Induced Effect	38.5	\$1,062,290	\$2,850,449	\$5,247,915
Total Effect	687.4	\$19,376,230	\$26,395,188	\$140,247,013

Employment denotes number of annual jobs.

Direct Effects—represent the initial change to industries considered relevant to the production agriculture and short rotation woody crops sectors.

Indirect Effects—represent changes in inter-industry transactions when supplying industries respond to demand changes from directly affected industries (the direct effects above).

Induced Effects—represent changes in local spending that result from income changes in the affected industry sectors.

Employment—annual average of monthly jobs in the industry. A job can be either part-time or full-time, and a person can hold more than one job (the employment or job count is not necessarily the same as the count of employed persons).

Labor Income—all employment income, including employee compensation (wages and benefits) and proprietor income.

Value Added—represents the difference between an industry's total output and the cost of its intermediate inputs. Intermediate inputs are calculated as gross output (sales or receipts plus other operating income plus inventory change) minus intermediate inputs (consumption of goods and services purchased from other industries or imported).

Output—represents the value of production (sales) by an industry in a calendar year.
